

- **Opposition to the mental structures :**
The panel is the object and can be the subject

Object

Subject

- **Phenomenological Look:**
Why is Tourneldak not a structure?
These panels can be a building that creates a place for life.

Material for Cover

Structures for creating space

- **Design Concept:**
Convert the panel to a place to live
After the natural disasters, after the war, cheap houses , ...

- **Structural Concept:**
Knitted hands are a symbol of the solidarity of people who are damaged to survive.

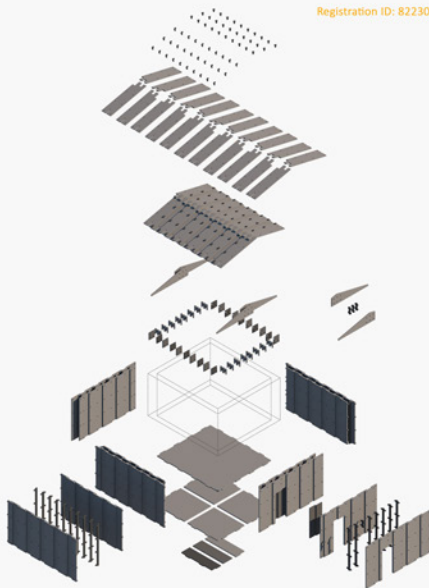

Why "rescue house" ...?

In this design, we have been trying to design a modular house with troldekt material that can be used for unfortunate situations. This design can be used for people with natural disasters (earthquakes, floods, etc.), or involved in abnormal disasters such as war. Even this plan could be used to organize the poor and create cheaper homes.

This design consists of 17 models of the troldekt page. With a different number, this design gives you a home without the need for any tools and means. Installation of this design is very easy and with a manual, even the users themselves can install the house and do not need an expert. And since its walls are two layers, it creates a robust structure against wind and atmospheric problems.

If needed, this house can be collected and moved to another location, since it is easy to transport. This design is in perfect harmony with the material properties of the troldekt and can be used in various climates of the world. At the interface between the ceiling and the wall, there is a space for light and ventilation

- **Product properties:**

High static
(Two shells)

No need for tools

Easy installation

Ability to move

Different climate

Lighting & ventilation

Rescuing a human being is the salvation of mankind
