

Press release from Trolldtekt A/S:

Trolldtekt® wave wins German architecture prize

Within a short space of time, Trolldtekt wave has achieved more international acclaim – its new wave-shaped acoustic panel has just won an ICONIC AWARD from the German Design Council.

Trolldtekt A/S's new Trolldtekt wave has been given a warm reception by international designers and architects. In June, the acoustic panel won a Green Product Award. And now, the German Design Council has decided to honour the product with an ICONIC AWARD 2015 in the category Product > Wall, Floor, Ceiling.

Simple and aesthetic

The ICONIC AWARDS celebrate visionary architects and innovative, sustainable products. The jury explained its choice of Trolldtekt by describing Trolldtekt wave as sculptural wall and ceiling panel whose natural and simple aesthetics harmonise well with many different types of rooms. The jury emphasised that the acoustic panel's waves create an interesting play of light and shadow without having a distracting effect, while flexible installation options allow a virtually unlimited number of individual design patterns. Moreover, the panel highlighted the fact that Trolldtekt wave is Cradle to Cradle-certified.

ICONIC AWARDS are presented in the following categories: Architecture, Interior, Product, Communication and Concept. The awards will be presented to the winners at a ceremony at the trade fair for real estate and investment EXPO REAL in Munich on 5 October 2015.

Proud of international awards

CEO of Trolldtekt A/S, Peer Leth, is very proud that the new product has received two prestigious awards in such a short space of time.

"We never dared hope that Trolldtekt wave would have its international breakthrough so quickly," he says, before talking about the product development process:

"The idea for the wave-shaped acoustic panel is not new – the challenge has been to produce it industrially. However, our product development team has now solved this challenge, and we are able to manufacture Trolldtekt wave at our existing production facility. Our in-house architect has created the wavy design of Trolldtekt wave.

Cradle to Cradle-certified

The acoustic panel is part of the Trolldtekt series that is made from wood and cement. It is Cradle to Cradle-certified in the silver category, and boasts the same good acoustic, fire-protective and indoor climate properties as the classic Trolldtekt acoustic panels.

Trolldtekt wave has also been nominated for the German Design Award 2016 and the DETAIL Produktpreis 2015.

TROLDTEKT WAVE – FACTS

- Trolldtekt wave is a Trolldtekt acoustic panel with an undulating wave-shaped surface.
- The acoustic panel is Cradle to Cradle-certified in the silver category and has good acoustic, fire-protective and indoor climate properties.
- Each panel measures 2000 x 600 mm and is supplied natural as well as in Trolldtekt's standard colours.
