

COMPETITION NUMBER 7777

BE INTERWOVEN

Searching for a new geometry to place the Troldekt material, is a very conventional response to the problem.
Looking beyond, we want to go further.

Our target is to extract the essence from the Troldekt panels, from their nature to their acoustics qualities.
Taking inspiration from the flexural strength the wood fibre brings to the mix, we have developed a new textile product.

This new product offers a higher adaptability to a wide range of situations.
The textile system keeps the amazing properties of Troldekt and also provides an excellent sound-absorbing properties.

We have opted for a flexible material in order to meet different demands and requirements.
Among other uses it can be applied to vertical and horizontal coverings.
