

NoiseFree Escape

Silent, Beautiful, Functional
Trolldtekt Acoustic Panels

Plan
Scale 1:20

Noisefree Escape concept starts with studying the proprieties of Trolldtekt acoustic panels: the acoustic and the aesthetic propriety. That is how we came up with the idea of creating a space, a micro architectural model that can serve as a secondary room in large and noisy interior space. The "noisefree box" will be suitable for a wide tipe of spaces like industrial , office, airports spaces, where there is always noise and a place for reflection is always needed. The octogonal form prevents noise from entering the box, by displacing the entrance opposite the noise source. Moreover, the form is a modular one and it can be jointed with more modules to create larger spaces for relaxation, discutions etc. Beside the acoustic characteristic, the box can redefine an open space and even increase its aesthetics qualities thanks to the fine lines of the wood component in Trolldtekt acoustic panels. It is a place to escape from noise and relax during a work break or even work there.

Reconfigurable spaces: Modules of spaces

Noise protection-The module entrance must be located opposite the noise source, or can be totally closed by glass pannels. Trolldtekt pannels absorb the noise.

Facades: Trolldtekt acoustic pannels, wood structure for frames
